

# Enterprise-class loan processing and loan management

## Overview

NetTeam's OpenLoan Pro™ Solution is designed to provide secure, robust, and enterprise-class loan processing and loan management for small and mid-sized financial institutions.

OpenLoan Pro™ is designed for one purpose – improving your bottom line. More efficient loan management reduces costs and allows more resources to focus on revenue enhancement.

OpenLoan Pro™ accommodates a broad variety of loan processing features and is easily customizable for additional loan products and associated workflow.

OpenLoan Pro™ provides multiple choices for underlying implementation platforms. Since it is based on open system technologies, it is easy to run it both on proprietary (Windows, IIS and MSSQL/ Oracle) or open source (Linux, Apache and MySQL) platforms.

## Product Features

**Loan application processing and status tracking**

**Built-in loan qualification and debt analysis tools**

**Loan approval and document order generation**

**Preliminary loan application and GFE generation**

**Easy means to track and inter-relate loans within the same account**

**Ordering and storage of supporting documentation**

**Management reporting**

## System Features

**CRA, HMDA, and RESPA Compliant**

**Supports 128-bit SSL and PGP encryption**

**Strong user role management and LDAP authentication**

**OS Flexibility:** Available on Windows Server 2000/ 2003, Linux (RedHat/ SUSE) and Sun Solaris operating systems

**DB Flexibility:** Available on MS SQL, Oracle, MySQL and PostgreSQL

**Web Server Flexibility:** Microsoft IIS or Apache

## Customization

OpenLoan Pro™ offers customization flexibility in the areas of loan products definition, user interface, workflow and standard reporting features.

NetTeam's OpenLoan Pro™ also provides easy integration options with third party core banking, other financial and underwriting solutions such as ITI, Jack Henry, etc.
